EMINENT GOLD

PURSUING MAJOR GOLD DISCOVERIES IN THE GREAT BASIN | NEVADA

Investor Presentation - June 2025

TSX-V: EMNT
OTCQB: EMGDF
FSE: 7AB

DISCLAIMER

This document has been prepared by Eminent Gold (the “Company”) to introduce the Company’s mineral exploration projects. Because it is a high-level summary presentation, the information contained herein cannot contain all the information that should be reviewed before making an investment decision.

SUMMARY OF CAUTIONARY NOTES

Forward looking statements are inherently uncertain
Canadian mineral disclosure differs from U.S. mineral disclosure.
See full disclosure records for Eminent Gold at www.sedar.com
Michael Dufresne, P. Geo is the QP who assumes responsibility for the technical contents of this presentation.

THREE NEVADA GOLD PROJECTS

UNLOCKING THE POTENTIAL FOR MAJOR DISCOVERIES

Our goal is to make a world class gold discovery in Nevada aligned with the positive outlook for the price of gold.

We have a compelling pipeline of three unique, drill-ready gold exploration projects, which we plan to test consecutively over the next 12 months.

PROJECTS: 100% OWNERSHIP

Hot Springs Range Drilling the nearby ~50 M oz Au Getchell Trend[1] analogue

Gilbert South High-grade feeder vein target - drilling early 2025

Celts Potential open-pit analogue to Silicon (4.2 Mozs gold, total resource[8]) - drilling 2025

Fraser Institute Annual Survey 2023
Nevada ranked 2nd Most Attractive Mining Jurisdiction in the World[3]

Nevada's Mineral Wealth
Endowment of ~270 million ounces Gold and
Endowment of ~700 million ounces Silver[2]

US Gold Production
US is the 3rd Largest Gold Producer globally of which Nevada accounts for 72% of US gold production[2]

EXPERIENCED MANAGEMENT TEAM

Strong multidisciplinary team with a proven track record of past successes

Paul Sun

P.Eng, MBA, CFA

CEO, President & Director

Fifteen year capital markets and banking professional, mining engineer, and over twenty years in finance and operations

Daniel McCoy

PhD

Chief Geologist & Director

Former CEO of Keegan Resources (5M oz Esaase Deposit) and Chief Geo at Cayden Resources (El Barqueno), which was sold to Agnico Eagle

Martin Bajic

CPA, CA

CFO

Over a decade of experience serving as a director, CFO or consultant of publicly traded companies

Michael Bebek

Head of Communications

Former IA at Haywood Securities Inc. with over eighteen years experience in the resource sector, including Corperate Sec. at Keegan Resources

BOARD OF DIRECTORS

Paul Sun P.Eng, MBA, CFA **| Daniel McCoy** PhD **| Ann Carpenter** BSc Geology **| Michael Kosowan** P.Eng

TECHNICAL TEAM

TRACK RECORD OF MONETIZING EXPLORATION SUCCESS

Daniel McCoy PhD Economical Geology

Chief Geologist & Director

Former President & CEO of Keegan Resources, which discovered the **5M oz Esaase Deposit** and former Chief Geologist at Cayden Resources, which made a modern discovery of El Barqueno, resulting in acquisition by Agnico-Eagle.

Jim Slayton

Project Manager

Former project manager at Esaase & El Barqueno. A Nevada native having decades of experience with Noranda and other companies exploring in the Great Basin.

KEEGAN RESOURCES INC.

KEEGAN RESOURCES | PRODUCING
2008 - 2010 (now Galiano Gold)
Daniel McCoy, PhD *Chief Geologist*

Discovery of over **5 million ounces** with favorable market conditions

Cayden RESOURCES

CAYDEN RESOURCES | TAKEOVER
May 2013 - September 2014
Daniel McCoy, PhD *Chief Geologist*

100 discovery holes led to Agnico Eagle Mines takeover (sold for C$205M) with challenging market conditions

Former Employers of our Technical Team

HOT SPRINGS RANGE PROJECT

NEW MAJOR GOLD ANALOGUE EXPLORATION OPPORTUNITY

100% Ownership

Objective | Replicate and extend the ~50 Moz Getchell Gold Trend[1] by finding multiple multi million-ounce deposits.

MAIDEN DRILL PROGRAM IN PROGRESS

- First hole - completed
- Second hole - assays pending

HOT SPRINGS RANGE PROJECT

MAJOR GOLD ANALOGUE TO THE 50 MILLION OUNCE GETCHELL TREND

TARGETS **OTIS | SITKA | EDEN**

3 PRIORITY TARGETS

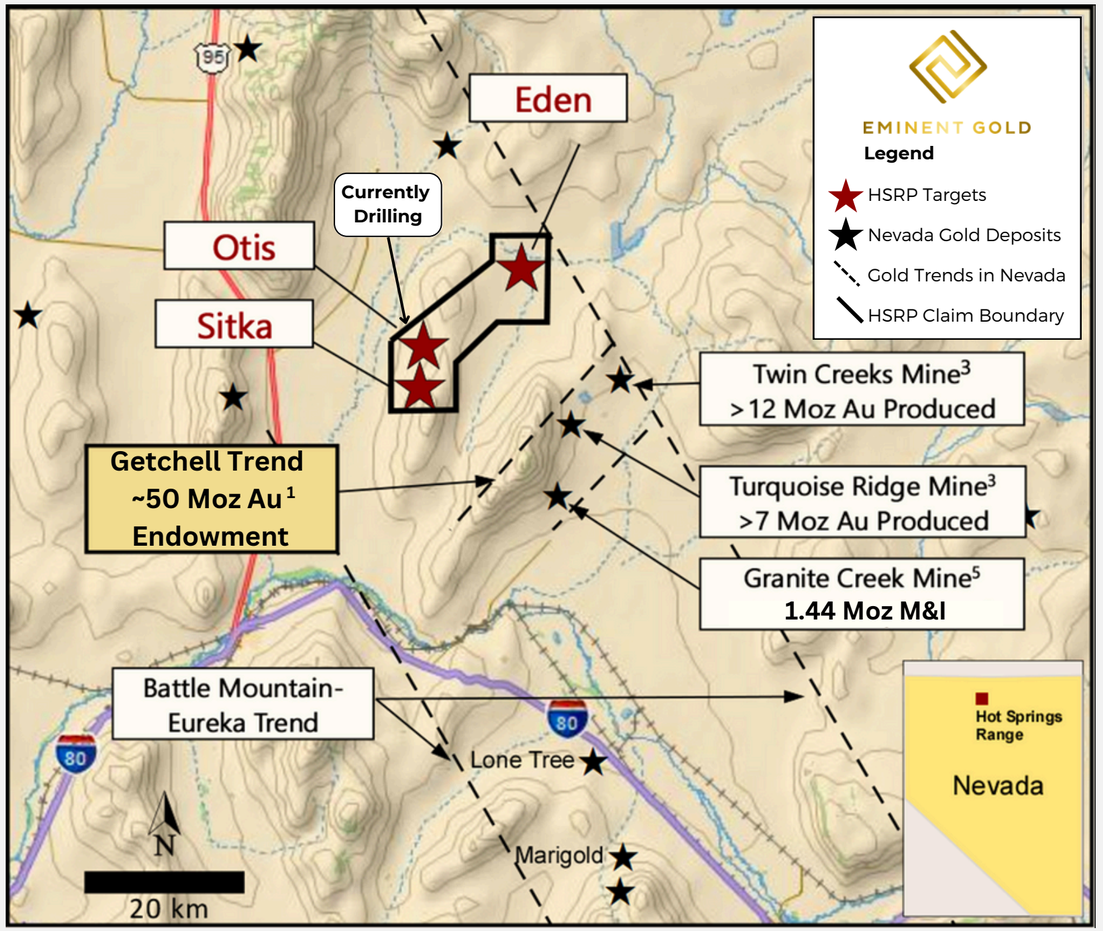
Targeting previously unexplored yet highly prospective areas

GEOCHEMISTRY

Comparable gold and pathfinder elements to the Getchell trend

GEOPHYSICS

Highly analogous geological framework supported by geophysics



STRONG SURFACE CORRELATION

HOT SPRINGS RANGE PROJECT VS GETCHELL MINING TREND

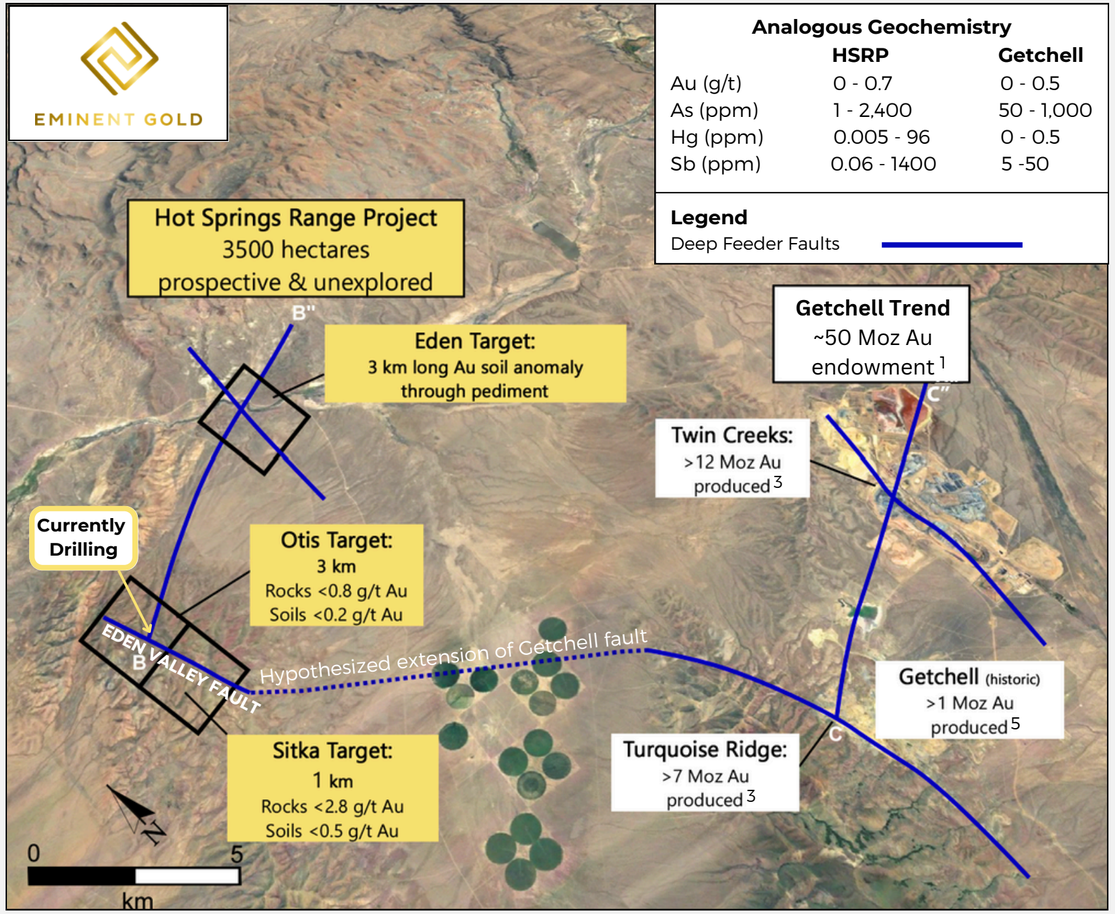
Analogous geochemistry to Getchell and Carlin systems

Otis lies on same interpreted structure as Turquoise Ridge separated by post mineral basin

Ideal host rocks include limestone and andesite (similar to Getchell Trend)

Geochemistry supports the conceptual model

Otis looking south | thrust outcrop - sill on right



Analogous Geological Framework | Hot Springs Range vs. Getchell Trend

TREND LONG-SECTION COMPARISON

HOT SPRINGS RANGE PROJECT | GETCHELL ANALOGUE

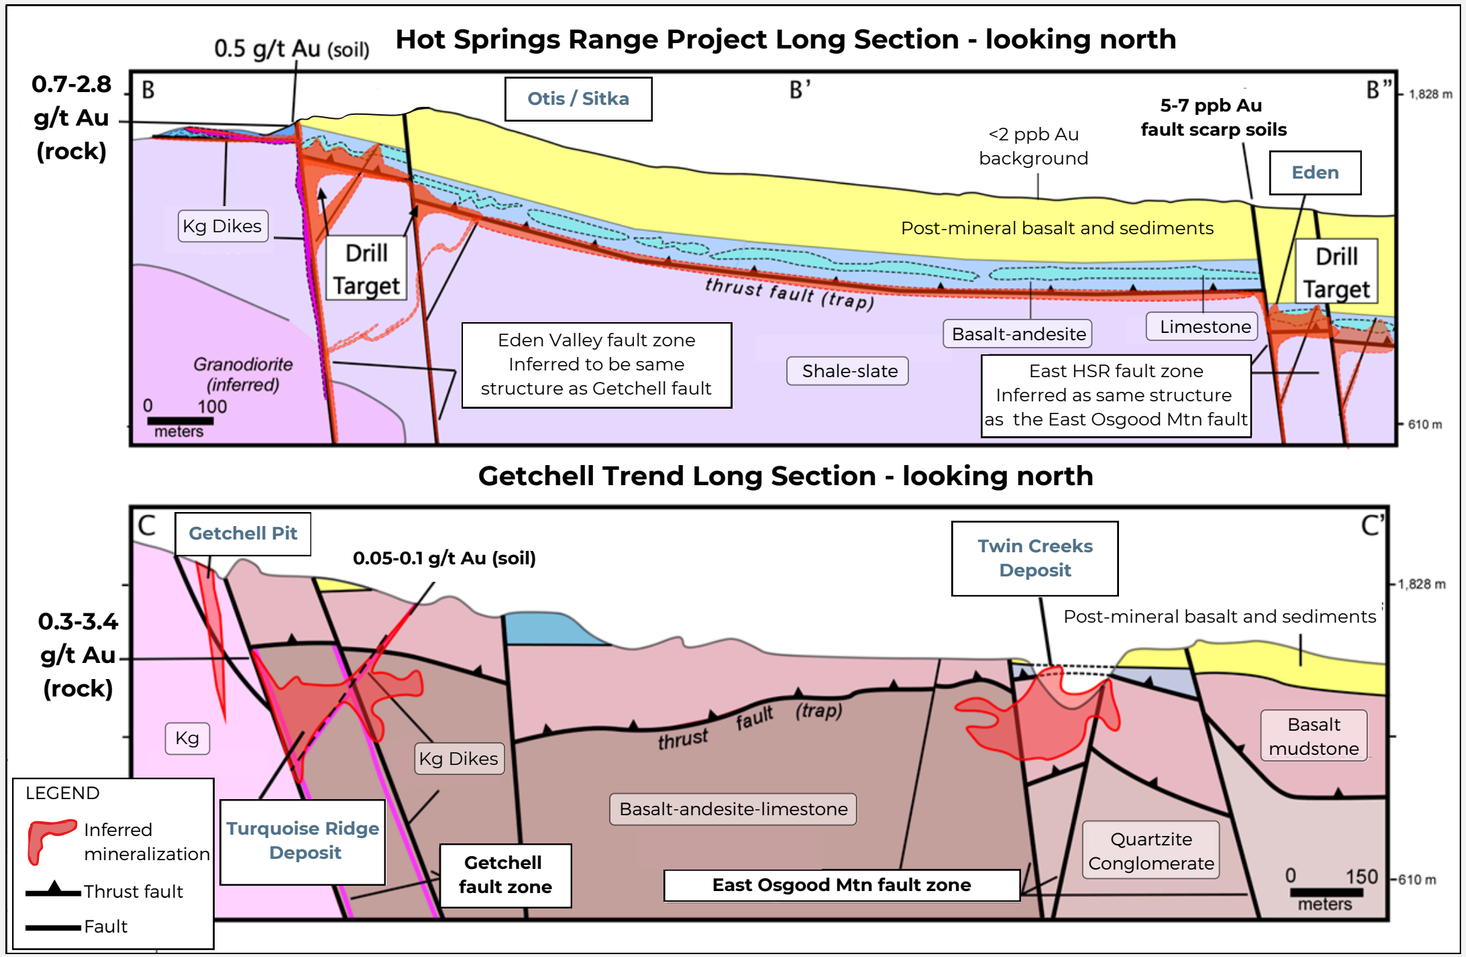
Similar thrust faults acting as traps for gold-rich fluids up from deep feeder faults

2.8 g/t Au sampled from surface rock chips at Otis, Eden Valley fault zone

Turquoise Ridge and Twin Creeks outcropped while the Hot Springs Range target is covered by post-mineral basalt and sediments , which explains why it was never previously explored

Long Sections **B-B'** from HSRP and **C-C'** from the Getchell trend showing steeply dipping NW oriented faults both bounding and feeding mineralization into receptive host rocks that include both andesite-basalt rocks mixed with limestone and mudstone.

- *Thrust faults play a significant role in many other Carlin type deposits.*



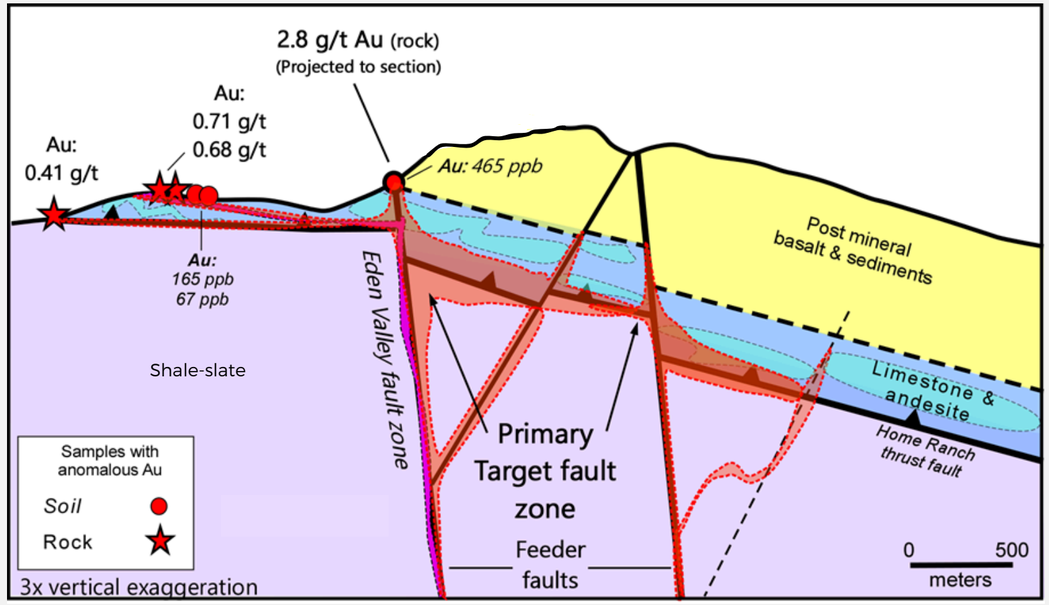
OTIS | CSAMT INTERPRETATION

ROBUST CONDUCTIVITY ANOMOLY SUPPORTS THE STRUCTURAL CONCEPT

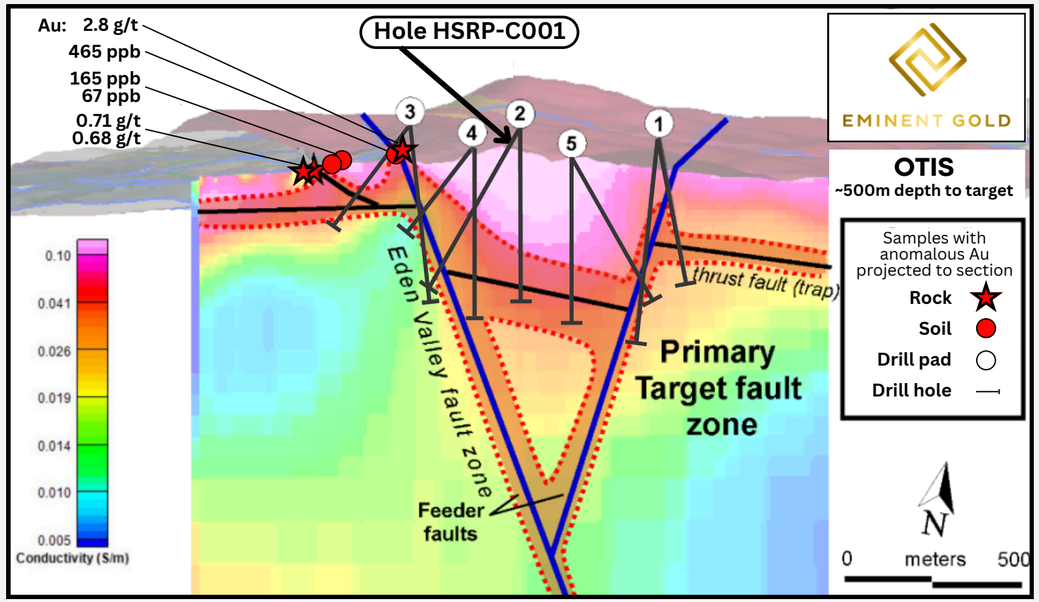
Prospective fault geometry at depth as well as soil (ppb) and rock chip (g/t) assay results support the structural model of near vertical feeder structures intersecting a shallowly dipping thrust fault.

The geophysics and geochemistry support the model of a potential significant gold-bearing system at depth

Interpreted geological cross-section: looking north



Magnified CSAMT cross-section: looking north



OTIS | MAIDEN DRILL PROGRAM

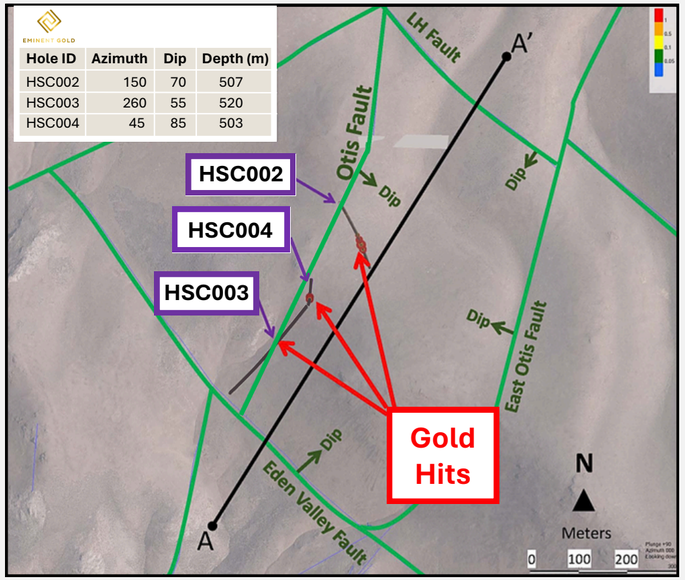
INITIAL HOLES CONFIRM GOLD MINERALIZATION

First-pass drilling into blind, previously unexplored targets intersected Au mineralization in all three holes; follow-up drilling required to define system extent. Drilling to recommence shortly

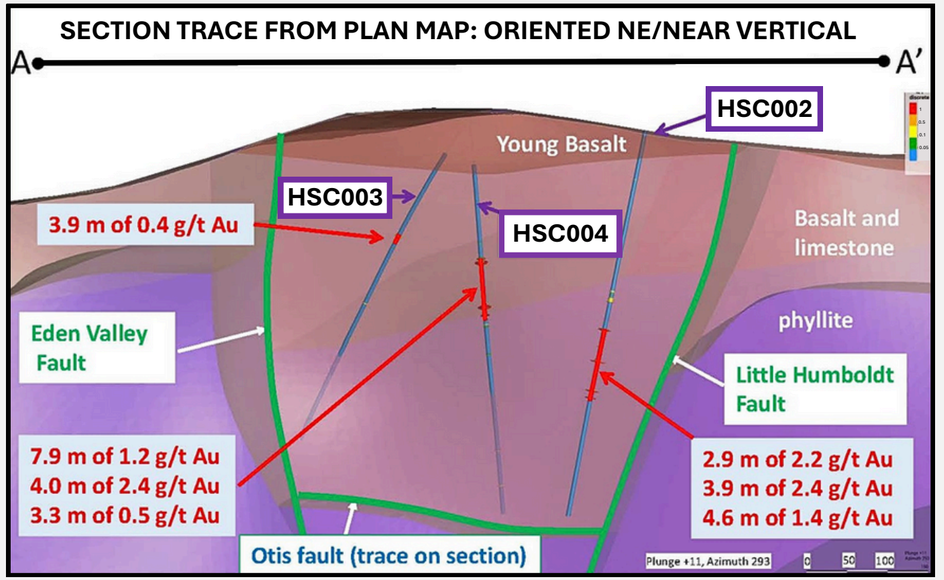
HSRP: Composite Results from HSC002–4

Drill Hole	From (m)	To (m)	Width (m)	Au (g/t)	As (ppm)	NR date	Including *Composite Assays
HSC002	272.8	275.7	2.9	2.2	2107	1/16/25	
HSC002	310.4	314.3	3.9	2.4*	807	3/05/25	0.5 m of 8 g/t Au
HSC002	347.1	351.7	4.6	1.4*	2252	3/05/25	0.9 m of 4.4 g/t Au
HSC003	178.4	180.9	3.6	0.4	744	6/18/25	
HSC004	178.6	186.5	7.9	1.2	1403	6/18/25	
HSC004	239.5	243.5	4.0	2.4	2836	6/18/25	
HSC004	250.9	254.2	3.3	0.5	406	6/18/25	

HSCOO2 48–475 m: 16 intermittent Au assays from 0.1 to 1.3 g/t



Otis Plan Map: Key Faults & Drill Traces

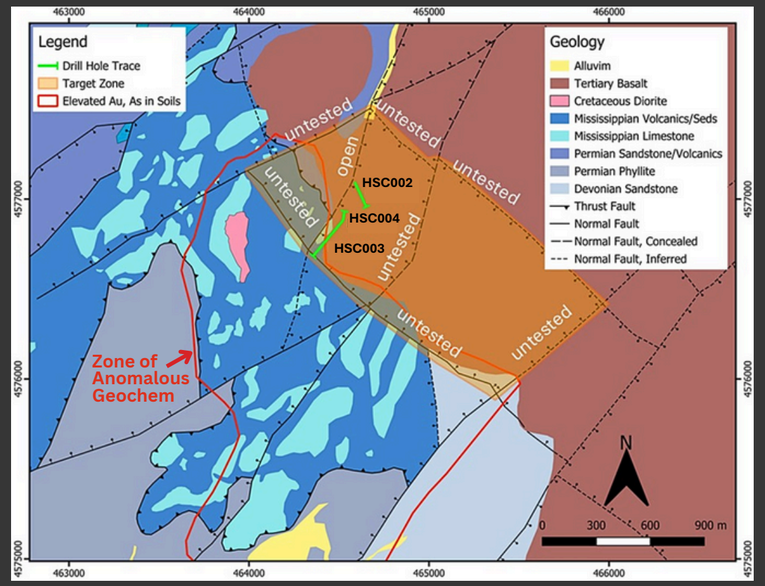


Cross-Section: HSC002–4 with Intercepts

DRILLING UPDATE

as of June 19, 2025

- Confirm NE structural trend typical of **Carlin-type** mineralization
- Open along strike with multiple **untested faults**
- Iron **oxide-rich**, favorable for cyanidation-based gold recovery



Otis Plan Map: Open & Untested NE/NW Faults

CLAIMS MAP

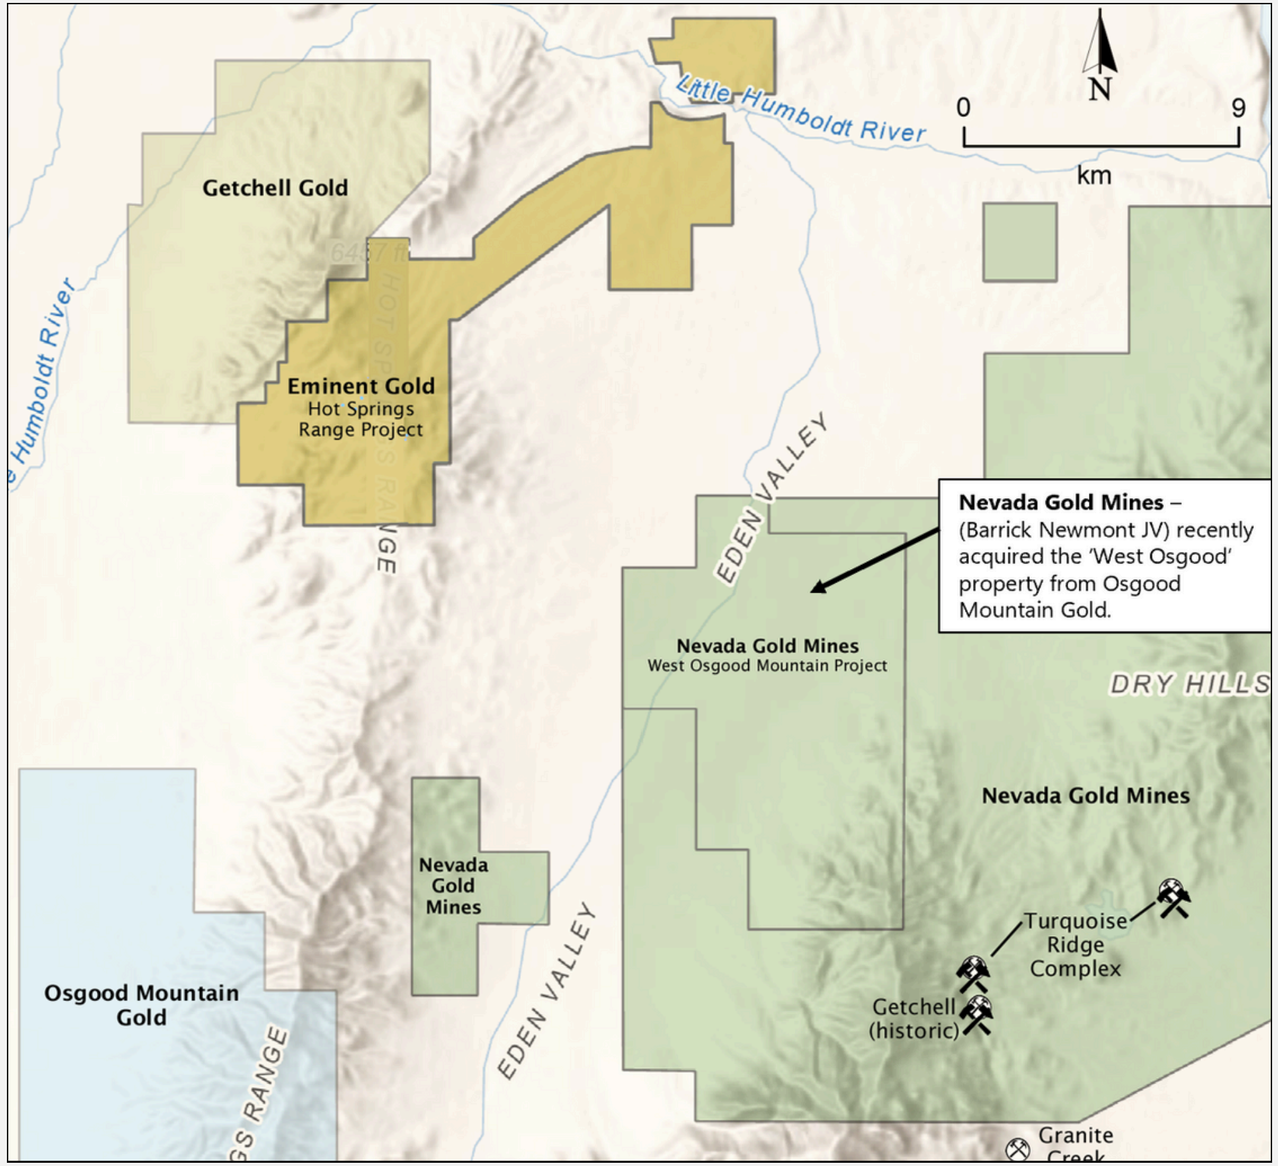
RIGHT ADDRESS FOR A MAJOR GOLD DISCOVERY

Comprises 419 federal lode claims on BLM land, totaling 3,500 hectares

15 km northwest of Nevada Gold Mines Turquoise Ridge District

New thesis in Nevada never previously explored - a direct analogue to a major gold exploration trend

Situated amongst major Carlin-style mines and nearby infrastructure



Hot Springs Range Project | Claims map

GILBERT SOUTH | CELTS

LOCATION | WALKER LANE TREND

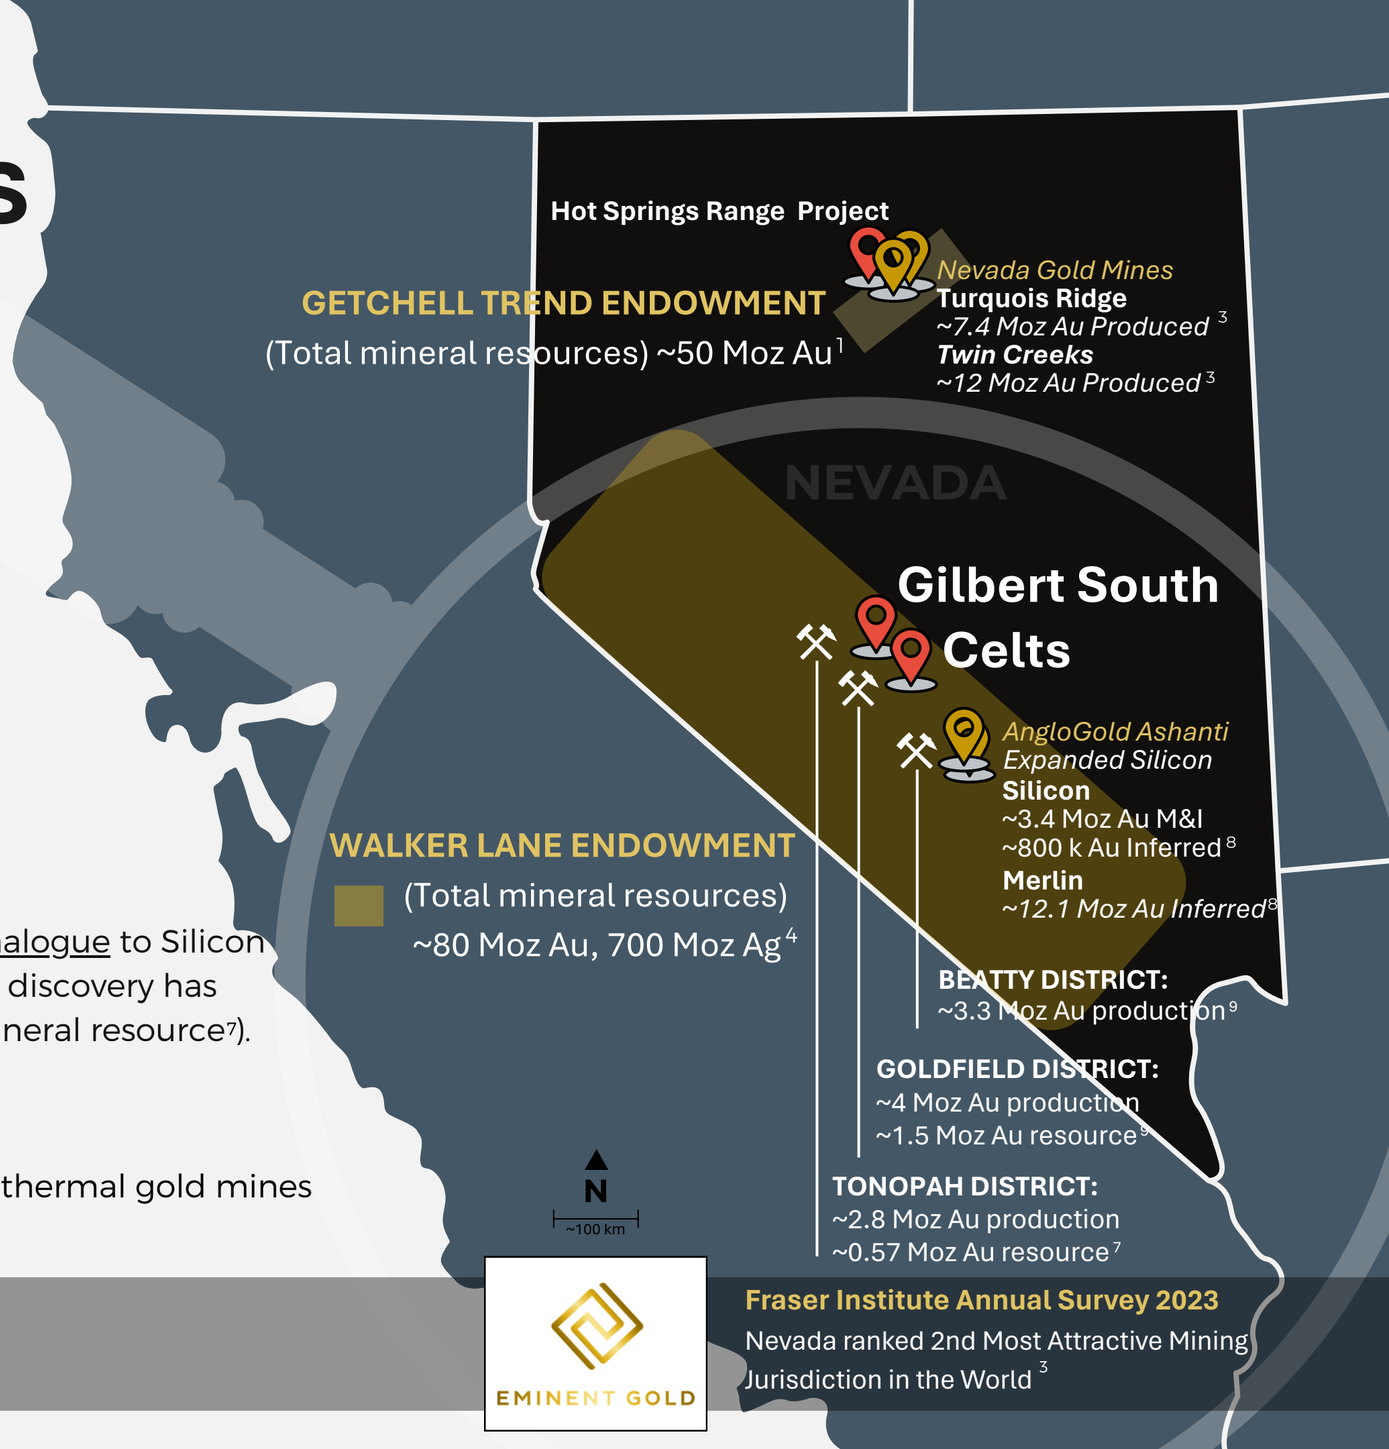
Gilbert South | 129 claims covering 1,050 hectares
Located 42 km west of Tonopah, Nevada

High grade gold veins similar to other multi-million-ounce deposits in the near by historic Aurora (2 Moz Au[7]) and the Tonopah district (2.8 Moz Au + 174 Moz Ag[7]).

Celts | 67 claims covering 560 hectares
Located 13 kms northeast of Goldfield District, Nevada (Historic Production of 4 Moz Gold and 1.5 Moz Silver[8]) and 100 kms northwest of the Silicon discovery

A potential heap leachable open pit deposit that is a direct analogue to Silicon (3.4 Moz Au M&I, 0.8 Moz inferred[7]), and with the recent Merlin discovery has become the **Expanded Silicon Project** (16.3 Moz Au - total mineral resource[7]).

REGIONAL GEOLOGY:
Multiple historical and operating low- and high-sulfidation epithermal gold mines



Fraser Institute Annual Survey 2023
Nevada ranked 2nd Most Attractive Mining Jurisdiction in the World[3]

EMINENT GOLD

GILBERT SOUTH PROJECT

NEW HIGH-GRADE VEIN DEPOSIT OPPORTUNITY

100% Ownership

Objective | Apply the epithermal vertical zonation model to target previously unexplored, high-grade feeder veins.

DRILLING 2025

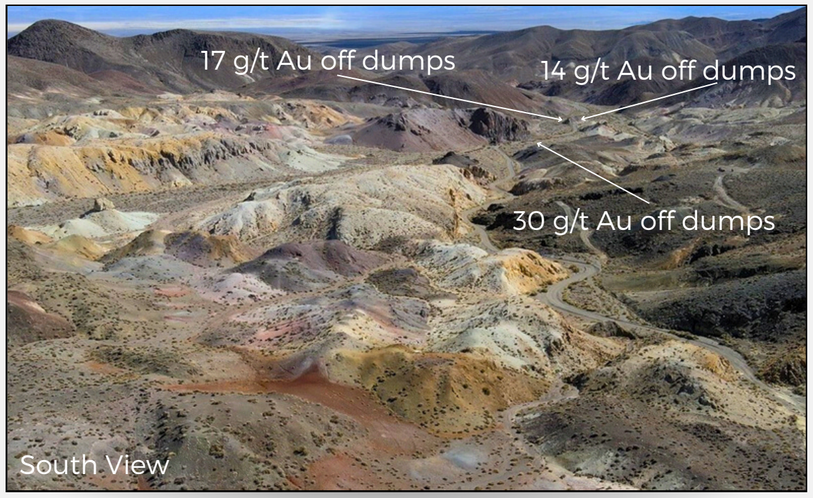
Photo of Gilbert South | looking south

GILBERT SOUTH | HIGH-GRADE EPITHERMAL GOLD SYSTEM

A MODERN EXPLORATION OPPORTUNITY

- Historical mining of high-grade underground veins
- 1980's mostly vertical RC holes exploring for heap leach potential
- Previous exploration lower-grade heap leach targets
- No previous exploration for large-scale high-grade vein deposits

Extensive visible gold found in historic dumps



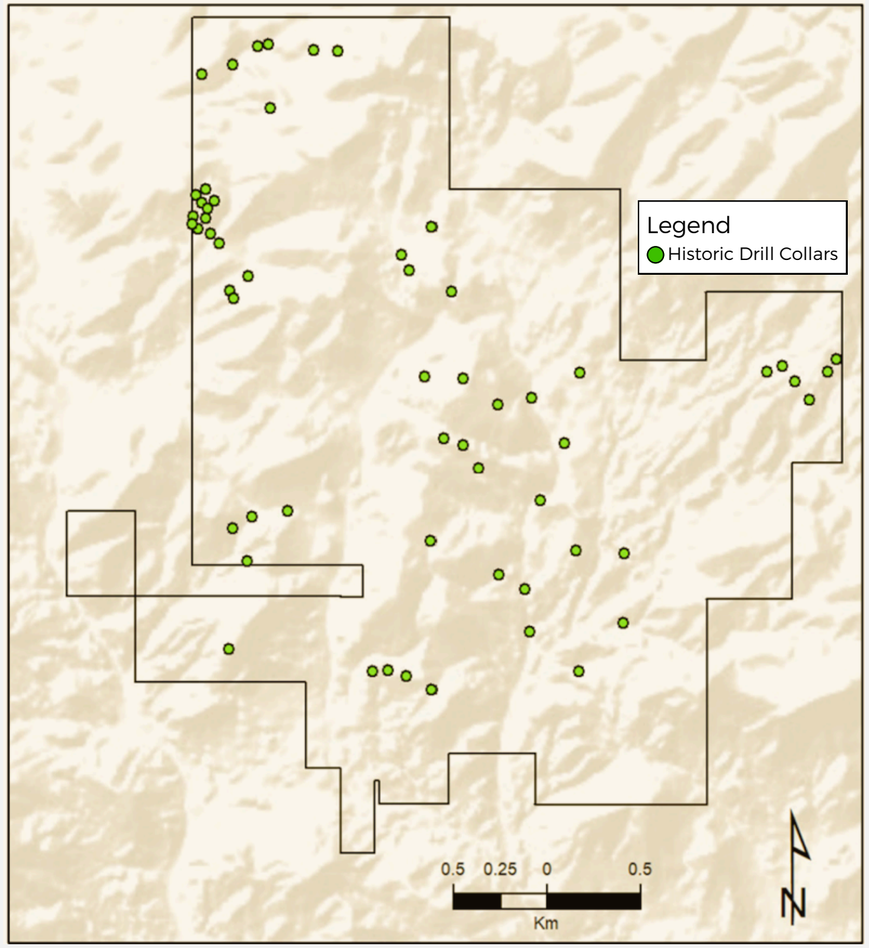
Historic Drilling Summary

Year	Company	Drill Type	Holes	Meters
1986-1988	Atlas	RC	40	>311
1994-1995	Pathfinder	RC	17	2498
1997	INMET	RC	13	2486
2005	Platt River Gold	RC	10	1309
2007	Gold Summit	RC	1	354

Historic Drilling Assay Highlights

HoleID	From M	To M	Interval_M	Au_ppm
34-8	0	24.4	24.4	0.52
34-8	54.9	56.4	1.5	1.17
40-08	76.2	82.3	6.1	1.3
40-08	76.2	79.2	3	2.4
SG-0805	71.6	73.2	1.5	3.76
SG-1205	170.7	173.8	3	1.47

Historic Drill Collars | Gilbert South



GILBERT SOUTH

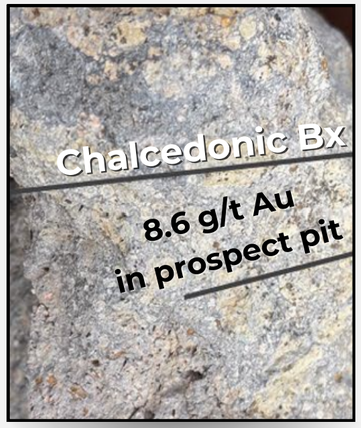
EPITHERMAL VERTICAL ZONATION IDEAL FOR SHALLOW FEEDER VEINS

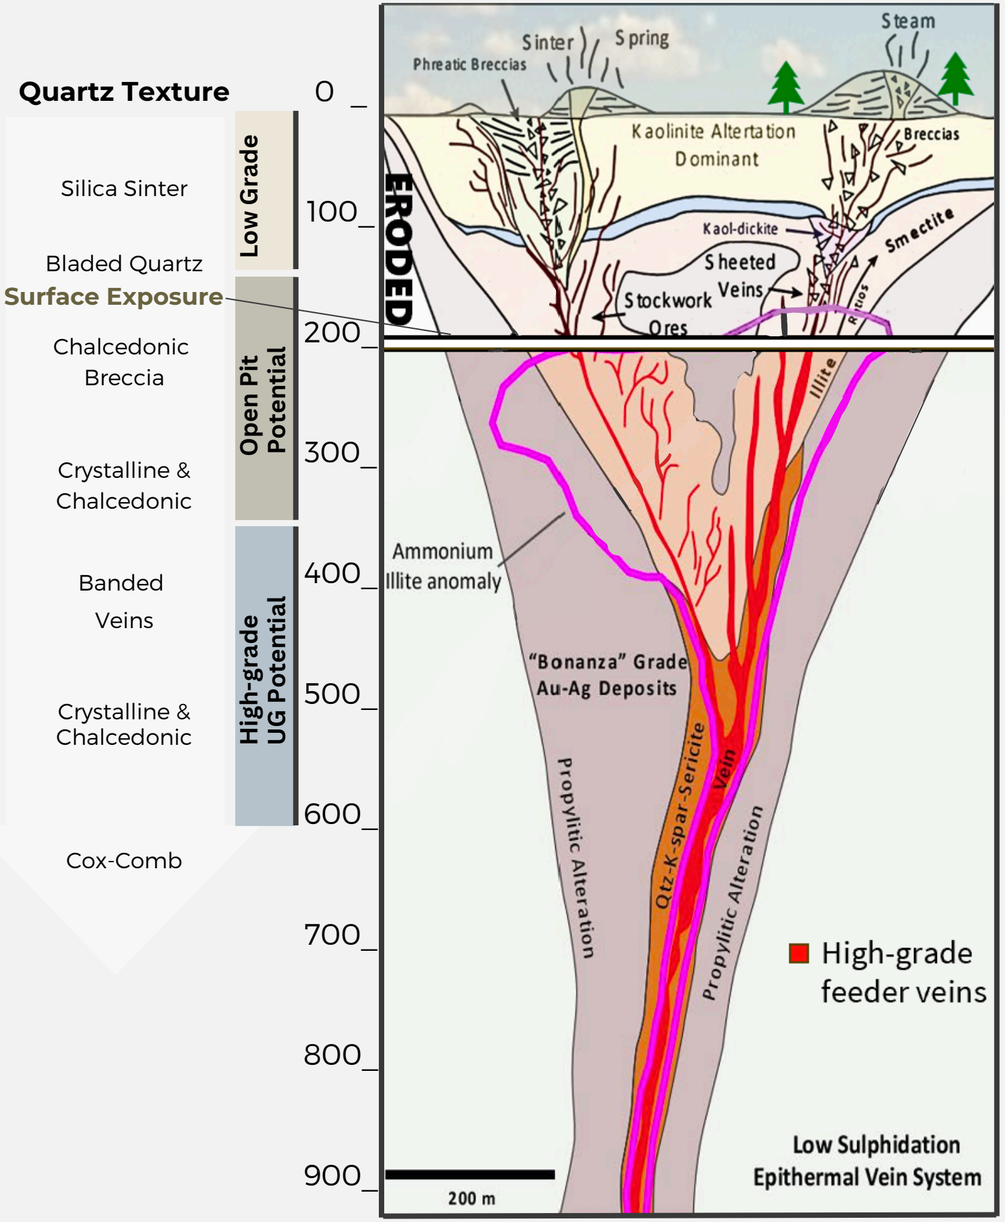
Rock textures indicate the system has eroded to the top of the high-grade vein level

Significant strike length

Potential for wider intercepts at depth

Examples of rock textures found at Gilbert South





GILBERT SOUTH

3 PROSPECTIVE DRILL TARGETS

PRETTY BOY

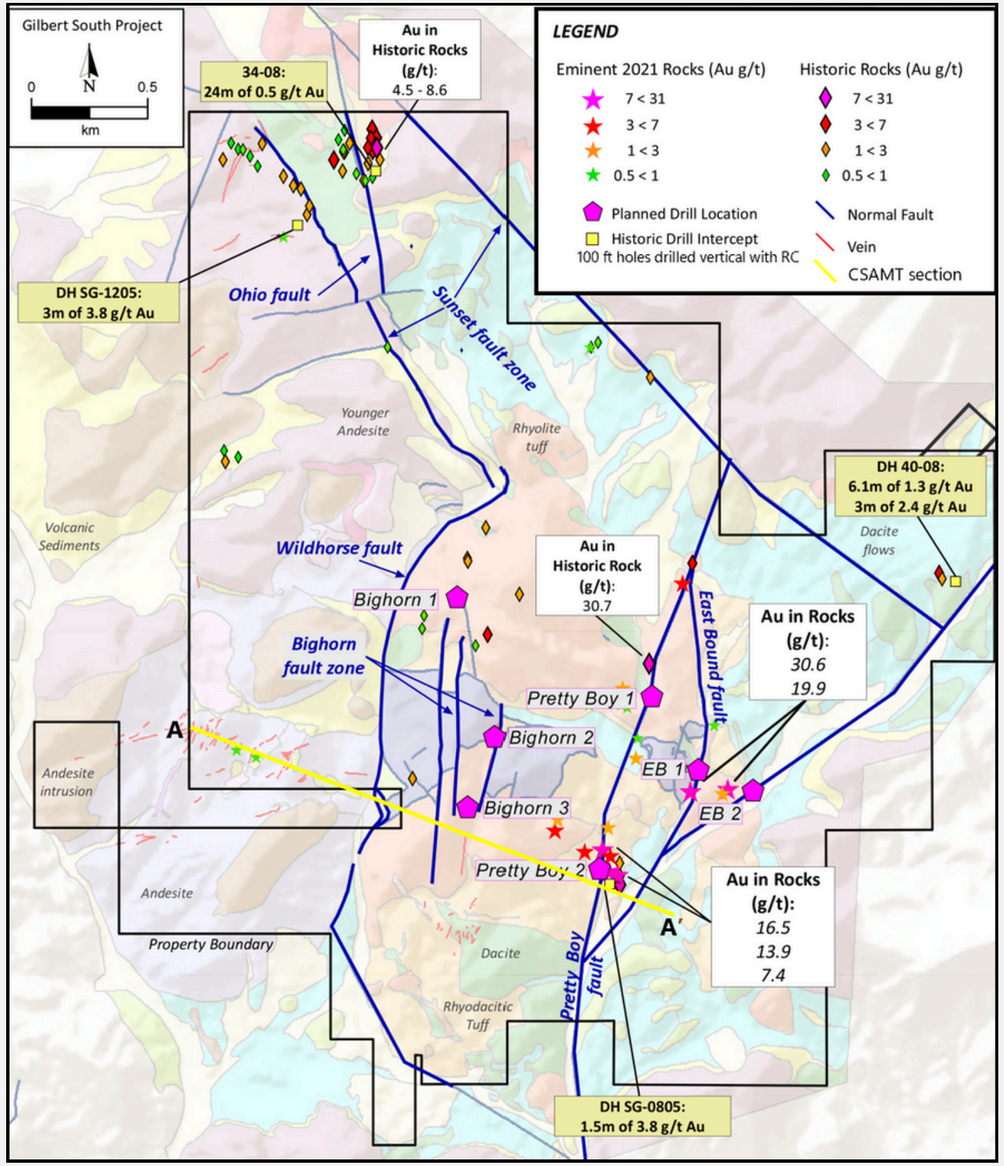
- Vein network linked over 2.5 km strike
- Abundant visible gold in banded veins
- Rock samples up to 30.7 g/t Au
- Large electromagnetic contrast
- Extensive small-scale workings along entire strike length

BIG HORN

- 1.5 km strike length
- Best gold-in-soil anomaly (<700 ppb Au)
- Electromagnetic contrast up to 250-meter-wide

EB (EAST BOUND)

- Minor workings
- Rock samples up to 30.6 g/t Au
- Fault intersections



GILBERT SOUTH

TARGETING SOURCE OF HIGH-GRADE EPITHERMAL VEIN SETS

Geophysics identifies multiple deep feeder-structures which correspond to mapped structures and surface geochemistry

TARGET STRUCTURES | DRILL READY

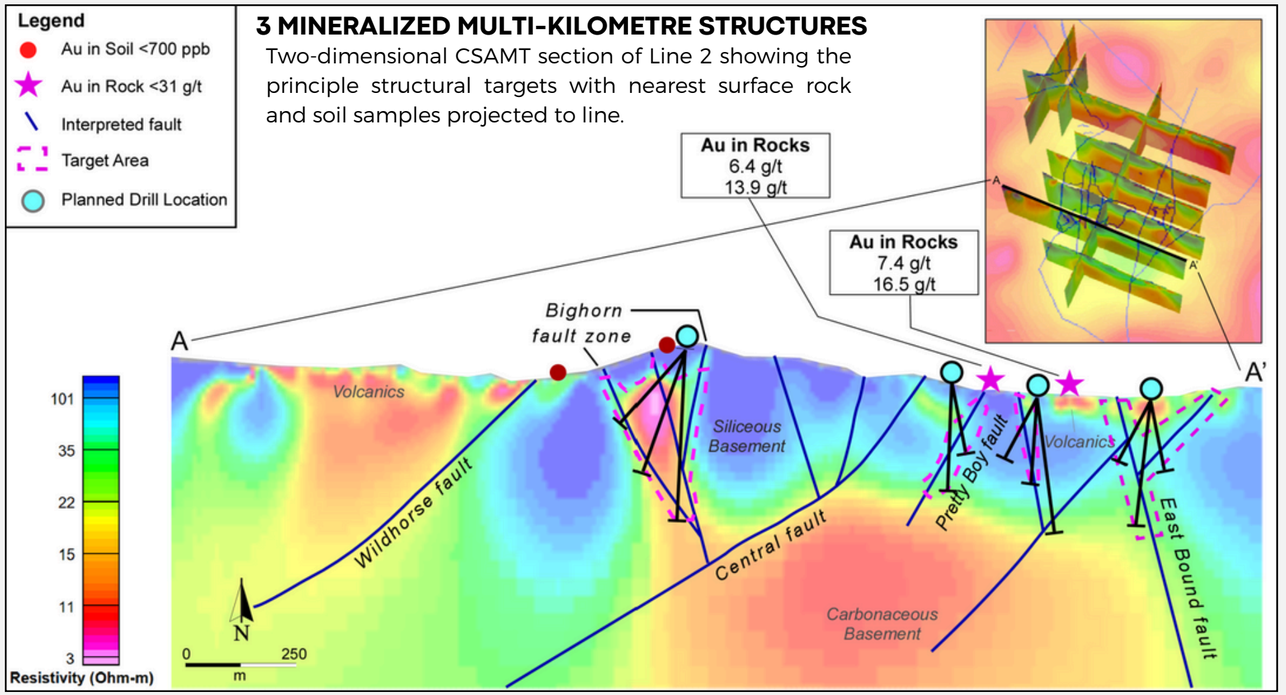
- up to 2.5 km long
- continue more than 250 m down dip
- Main high-grade vein targets never drilled

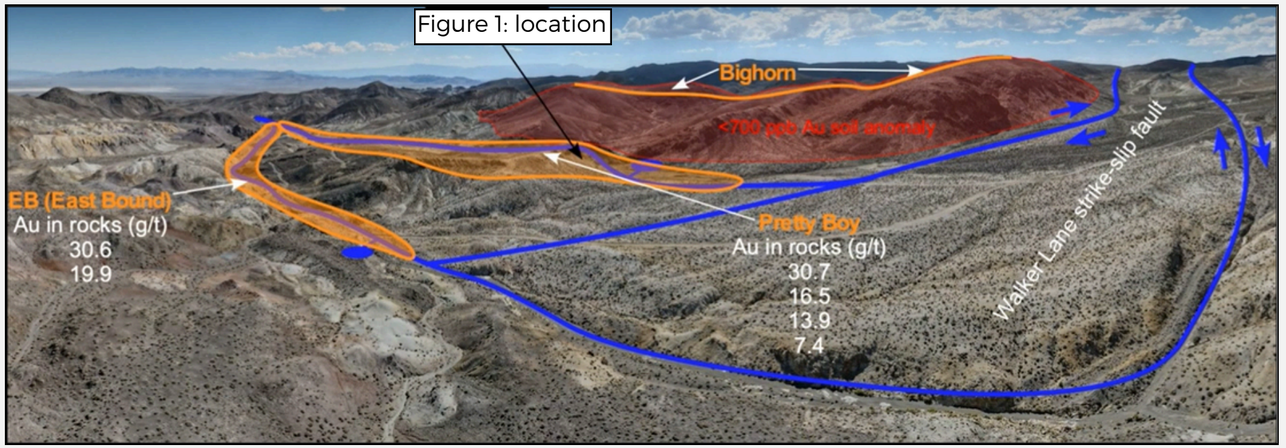
ABUNDANCE OF HIGH-GRADE GOLD VEIN SETS

Superficial veins appear to have potential to be part of one large epithermal system

Magnified outcrop vein

Pretty Boy surface outcrop veining





Panoramic view west

CELTS PROJECT

EXPLORING A NEW MAJOR GOLD ANALOGUE

100% Ownership *on completion May 2025*

Objective | To identify a similar plus-million-ounce deposit suitable for open-pit mining, like the Silicon gold project (3.4 Moz M&I, 0.8 Moz Inferred[3]), located beneath a similar steam-heated alteration dome.

IP SURVEY COMPLETED (03/12/2025) DRILLING 2025

Generated by the technical team that staked and identified Silicon

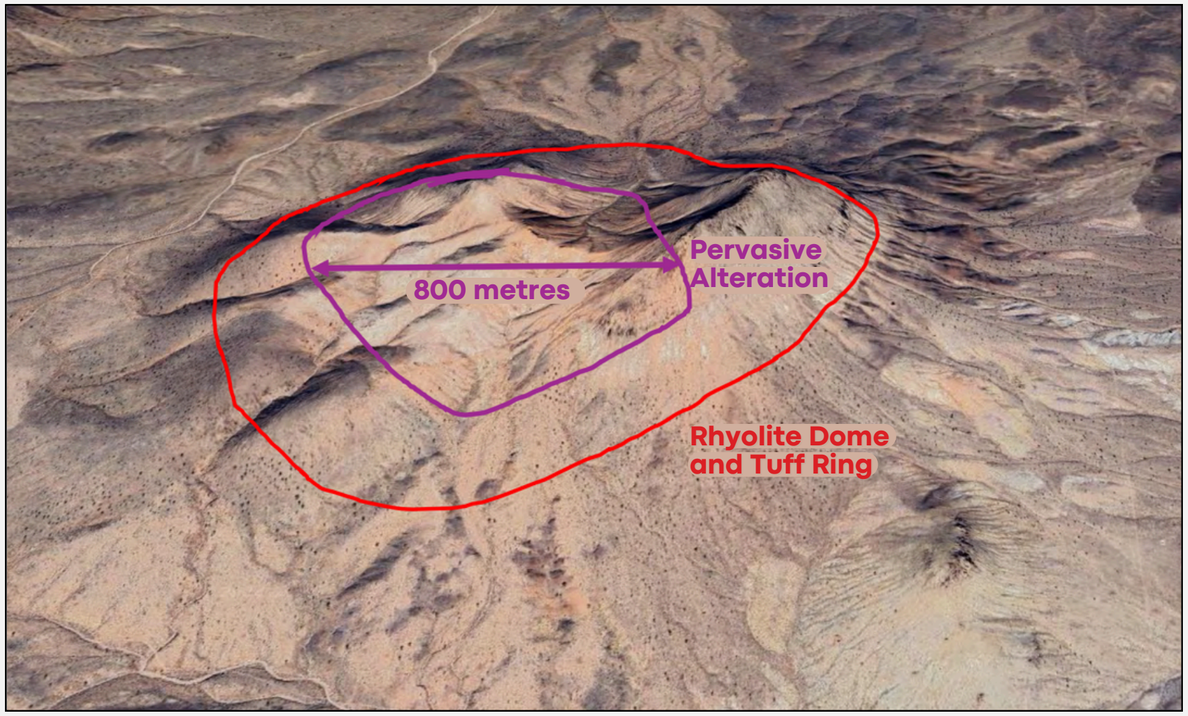
Photo of advanced argillic alteration in the rhyolite dome at Celts | looking northeast

CELTS

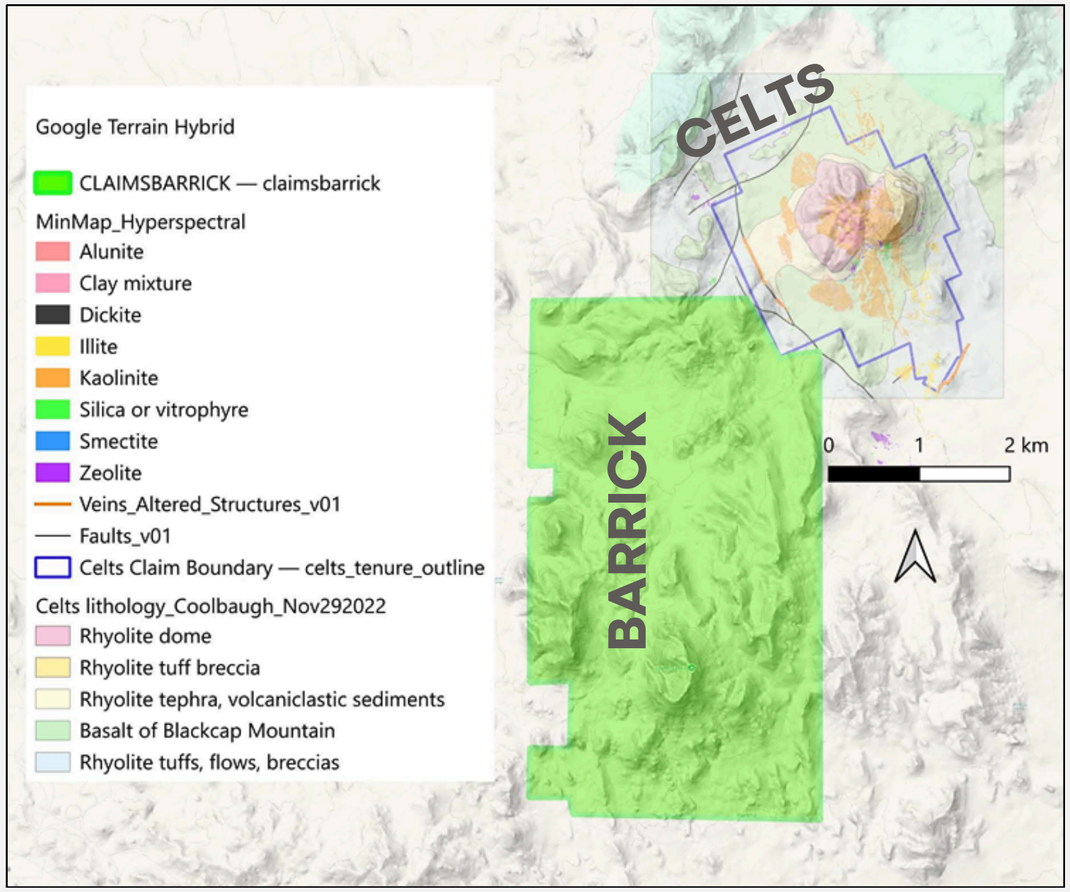
SATELLITE | CLAIMS | GEOLOGY MAP

- Rhyolite dome intrudes through rhyolite tuff and basalt
- Steam cap forms with alteration very similar to Silicon
- Celts and Expanded Silicon project (16.3 Moz Au incl. M&I + inferred[8]) host rhyolites are of equivalent age[11]

Figure below is a Google Earth image showing dome and steam cap, which form the most predominant topographic feature on the property



Recent staking by Barrick appears focused on ~10 Ma mineralization similar to Celts/Silicon/Merlin, not the older 20 Ma Goldfields trend[11]

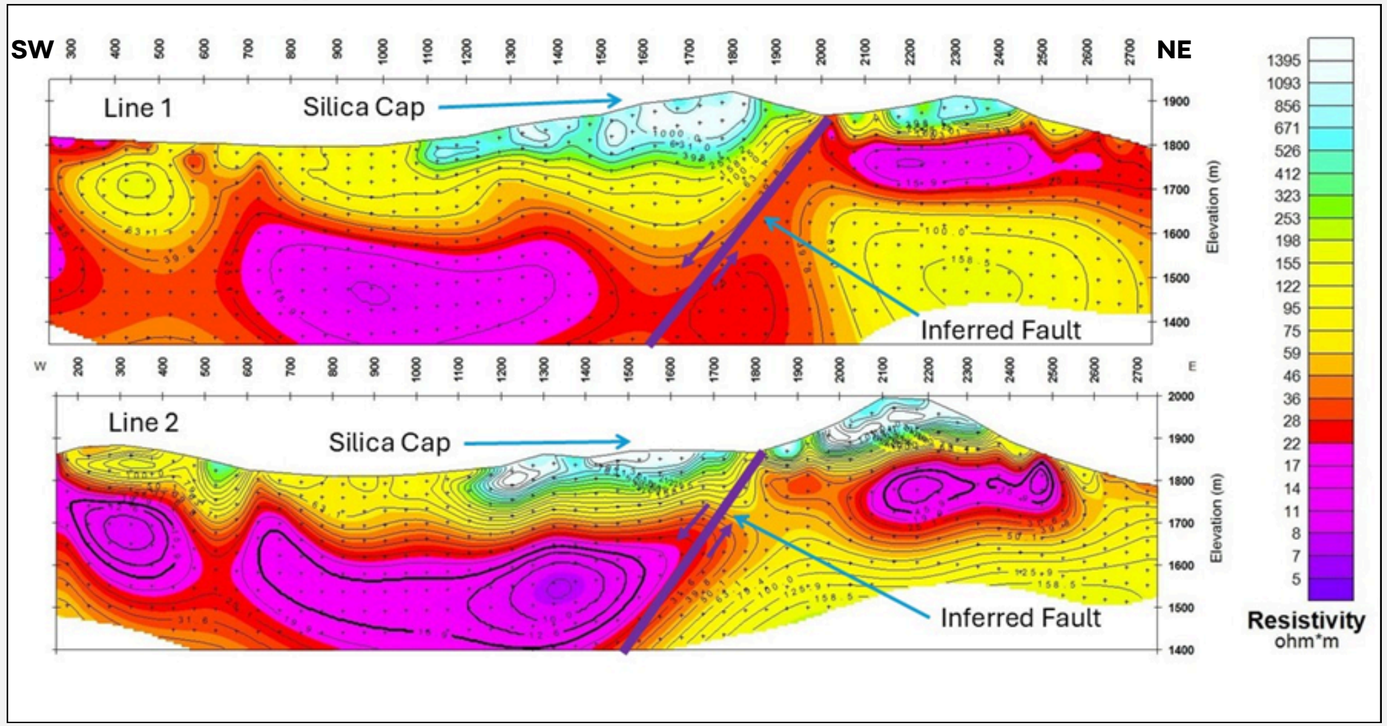


CELTS

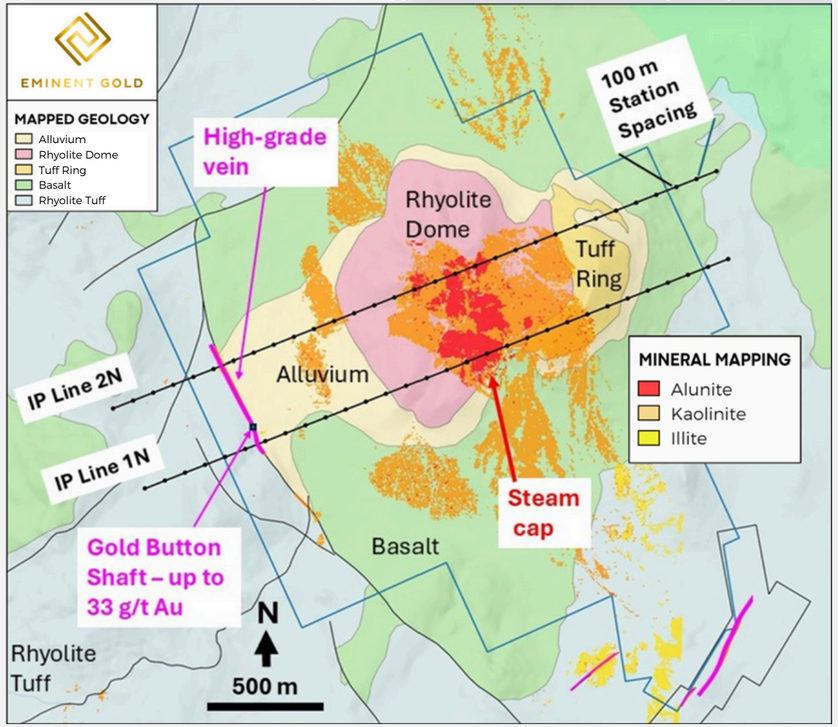
IP SURVEY CONFIRMS STRUCTURE ANALOGOUS TO SILICON

- Geophysics reveals a large fault in a small topographic divide atop the rhyolite dome, indicated by low-resistivity rock offset
- The westward offset of low-resistivity rocks indicates a fault with normal displacement
- The fault lies beneath steam-heated cap rocks with high resistivity due to abundant silica
- The apparent normal fault beneath the steam cap dips west and is nearly identical to the fault that hosts gold at Silicon

Cross-sections showing resistivity reveals potential normal fault under the steam cap



Geophysical/section lines on geology, alteration, showing major structure



CELTS | SILICON ANALOGUE

DISCOVERY OPPORTUNITY

A strongly developed, gold-poor steam heated alteration cell that may overlie a boiling zone

Steam cap is composed of advanced argillic alteration (alunite and kaolinite) and silica

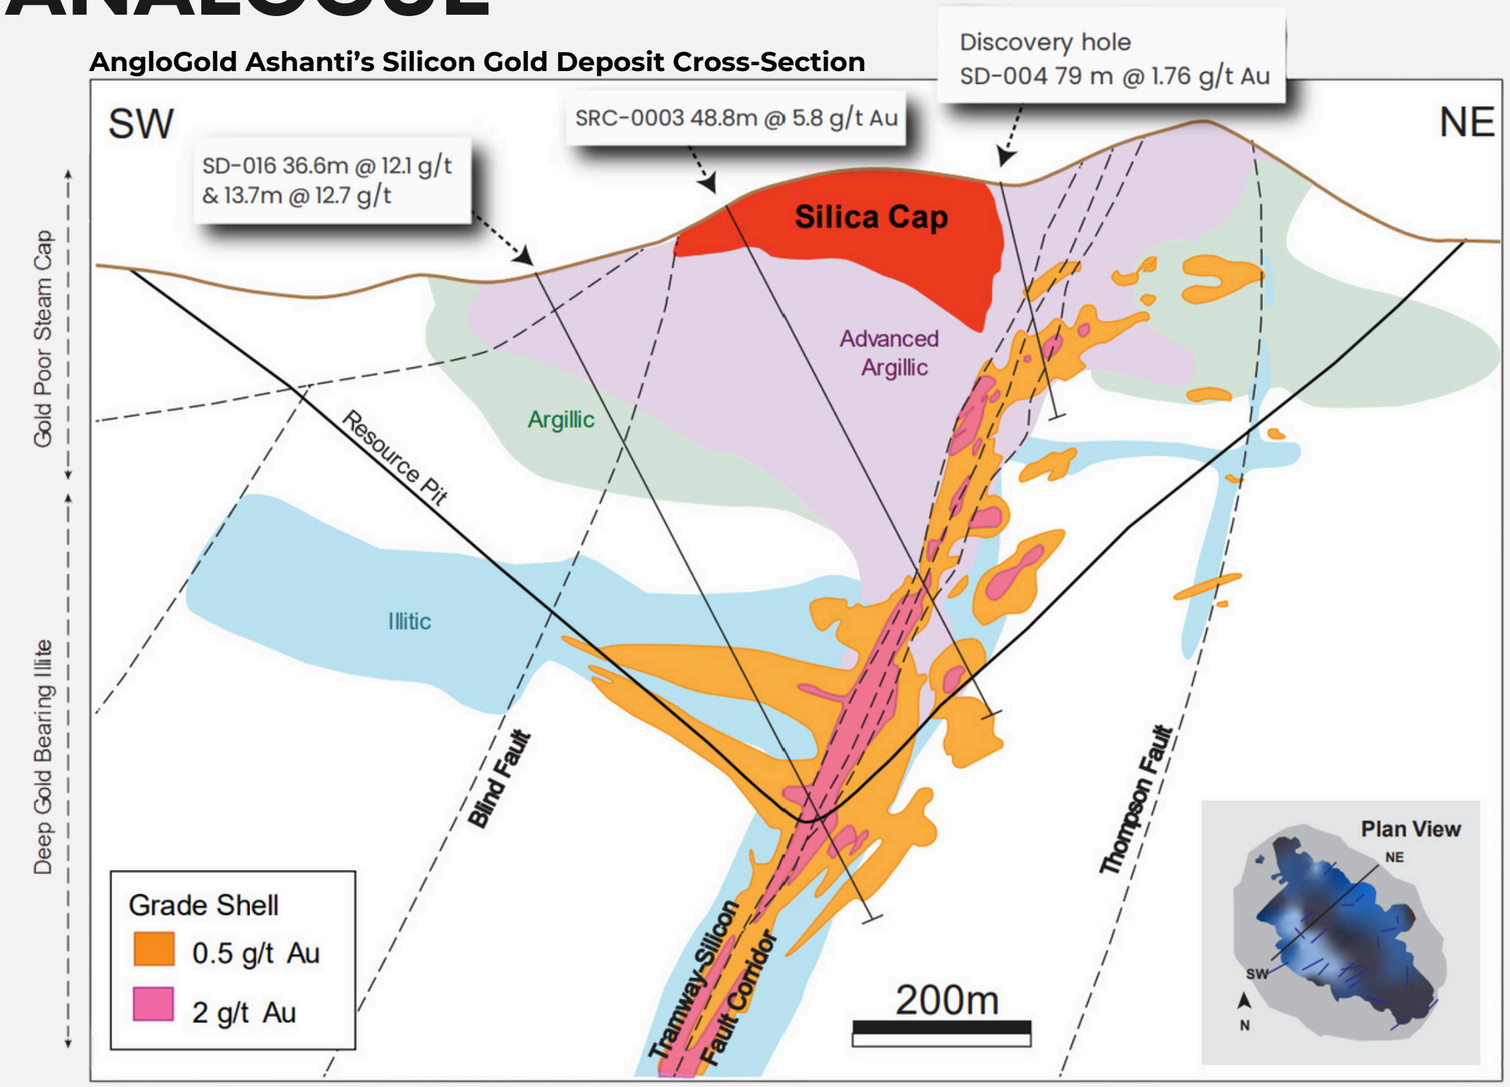
Alteration and mercury anomalies at surface at Silicon

Multiple similarities with AngloGold Ashanti's recent Silicon discovery

- Global resource of 3.4 million ounces M&I of oxide gold and 800 thousand ounces inferred [8]

The Company's QP has not visited the Silicon Gold Project and is unable to verify information pertaining to mineralization on the Project, and therefore, the information in this section may not be necessarily indicative of the mineralization on the Celt Project that is the subject of this portion of the Presentation.

AngloGold Ashanti's Silicon Gold Deposit Cross-Section



Drill hole locations are approximate and schematic.

CELTS | LONG-SECTION

TARGET CONCEPT

- Magma and steam conduit principal structural target for drilling
- Gold zones at depth below advanced argillic alteration (alunite and kaolinite) and silica is a classic feature of dome hosted epithermal deposits such as Silicon
- Mineralization may also pool under impermeable basalt unit
- High grade gold veins "leaking" around edge of basalt unit supports this mineralization model

WHY EMINENT GOLD?

Multiple large-scale gold discovery opportunities in a premier mining jurisdiction
Experienced management with a proven track record at monetizing discovery
Robust gold market - strong price outlook

All projects slated for drilling in 2025

HOT SPRINGS RANGE

Targeting a world-class extension of the 50Moz Getchell Gold Trend [1]

Drilling Commenced

GILBERT SOUTH

Targeting the source of previously mined high-grade veins

Drilling 2025

CELTS

Targeting an open-pit analogue to AngloGold Ashanti's Silicon (4.2 Moz Au [8]) discovery

Drilling 2025

HOT SPRINGS RANGE PROJECT

Eminent holds 100% ownership in 419 claims totaling >3,500 hectares at HSRP. 168 Leased, 143 staked in 2020 and 108 staked in 2021.

In addition, in March 2020, the Company entered into an option agreement to earn a 100% interest in 168 unpatented lode mining claims covering approximately 1,375 hectares, located on the Getchell trend in Humboldt County, Nevada.

Under the terms of the Agreement, the Company has up to five years to acquire a 100% interest in the Property by making cumulative cash payments of USD $136,140 and cumulative share payments of 1,650,000 common shares in the capital of the Company, followed by a $1,500,000 payment payable in cash or common shares at the option of the Company, as follows:.

- [x] 1. USD$36,140 Cash Payment and issue of 100,000 shares within 5 business days of the receipt of TSX Venture Exchange (“TSXV”) approval for the agreement upon entering into the Agreement (“Effective Date”);
- [x] 2. USD$25,000 Cash Payment and 150,000 shares on or before the first anniversary of the Effective Date;
- [x] 3. USD$25,000 Cash Payment and 300,000 shares on or before the second anniversary of the Effective Date;
- [x] 4. USD$25,000 Cash Payment and 300,000 shares on or before the third anniversary of the Effective Date; and
- [x] 5. USD$25,000 Cash Payment and 300,000 shares on or before the fourth anniversary of the Effective Date and;
- [x] 6. 500,000 shares and optional cash balloon payment of $1,500,000 on or before the fourth anniversary of the Effective Date.

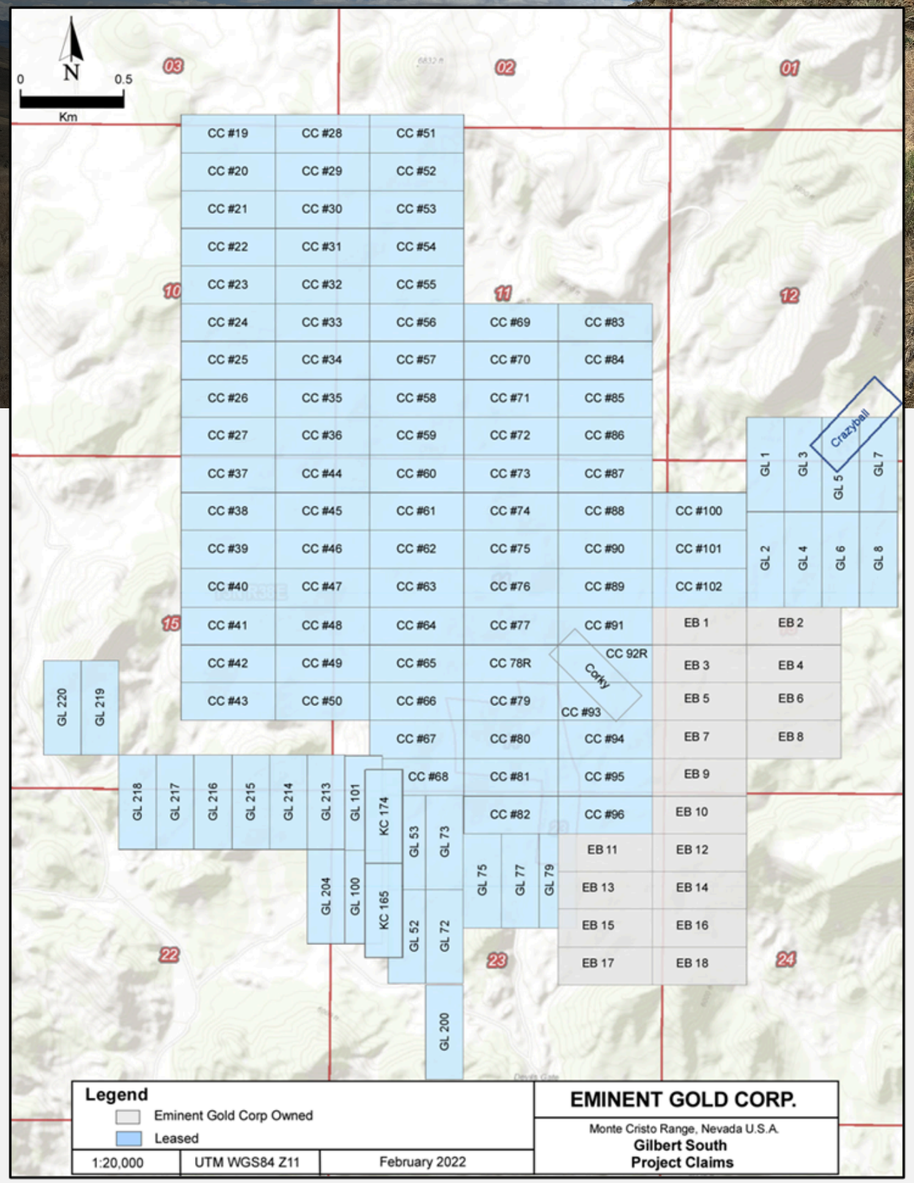
The Optioner shall retain a Net Smelter Royalty of 2% which the Company may purchase in 0.1% increments for USD$100,000 for each increment up to maximum of 1%.

GILBERT SOUTH

The Company acquired 100% interest in the 110 unpatented claims (890 hectares). By way of Consideration, the Company issued 350,000 common shares to the Seller. And an additional 200,000 common shares will be issued when the company initiates a drill program at Gilbert South Property, located 30 kilometres west of Tonopah in the Walker Lane trend, Nevada.

The Timberline claims are currently subject to a 3% net smelter return royalty, the Nevada Select claims are currently subject to a 2% net smelter return royalty, and the GL claims are currently subject to a 2.25% net smelter return royalty. The Company shall have the option and right to repurchase 1% of the GL royalty for $1 million (U.S.). The Seller shall have the option to buy down 1% of the Timberline net smelter return for $1.5 million (U.S.).

The 110 unpatented claims include:
Two (2) unpatented claims known as the “Nevada Select Claims”;
Twenty-seven (27) unpatented claims defined as the “GL Claims” and;
Eighty-one (81) unpatented claims defined as the “Timberline Claims”.



CELTS

The Company will acquire 100% interest consisting of 67 unpatented mining claims on BLM ground (560 hectares).
By way of consideration, as of November 20, 2024, the Company will pay US$400,000 as follows:

Total Payment: US$400,000

At Closing:
- US$30,000 in cash
- US$45,000 in Eminent common shares

Within Six Months of Closing:
- US$325,000 in cash or Eminent common shares (at Eminent's discretion, subject to regulatory approval)

Property Claims:
- 3% net smelter return (NSR) royalty
- Option to repurchase 1% of the royalty for US$1.5 million (reducing the NSR to 2%)

Proceeds Split:
- US$200,000 in cash and/or shares to each Orogen and a subsidiary of Altius Minerals Corporation ("Altius")

The Celts property is located 13 kilometers northeast of Goldfield (Historic production of 4.2 Moz gold and 1.5 Moz Silver). Celts is within the highly prospective Walker Lane trend of epithermal deposits, Nevada.
