

DRILLING A NEW NEVADA GOLD CORRIDOR

EMINENT GOLD

Team Behind a 5 Moz Gold Discovery
Kinross Gold Corp. Holds 13.8%
Management 18%

Hot Springs Range Project | HSRP

Eminent is the first company to drill this 10 km corridor for gold. The project sits ~15 km from the Getchell Trend. Drilling has confirmed Carlin-style mineralization under shallow cover in a similar structural setting to the Turquoise Ridge Complex.

Drilling Highlights to date:

Phase 1 Core Drilling grade — (HSC005 9.2m @ 3.2 g/t Au)

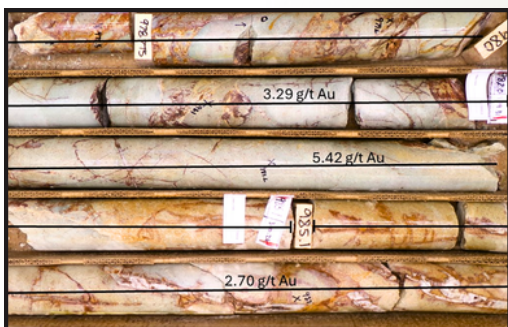

Phase 2 RC Drilling thickness — (HSR2601 57.9 m @ 0.3 g/t Au ending in 3.0m @ 2.1 g/t)

Otis currently drilling the upper halo of a broad mineralized corridor

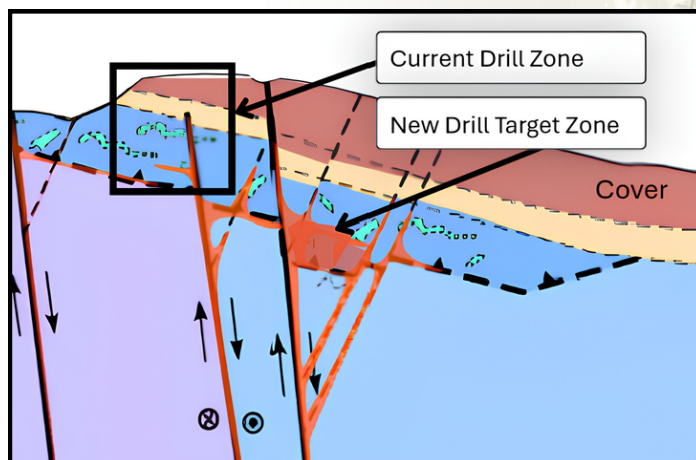

- Depth remains untested

Eden defined by a 3km long anomaly

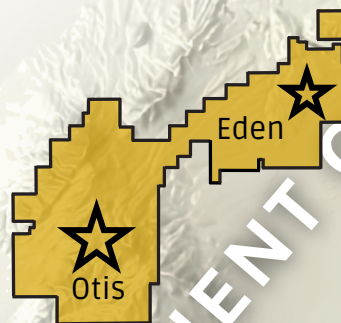

- Untested — first holes this fall

Oxide gold in core — Otis

Otis Target Conceptual Cross Section

HSRP

Advancing Exploration of a Newly Identified Carlin-Style Gold System.
Actively Drilling

Celts

Located in the Walker Lane Trend within the historic Goldfield district. Evaluating a direct analogue to AngloGold Ashanti's recent major discovery, the Arthur Project (Silicon & Merlin deposits). **Drilling Q4**

Gilbert South

Located in the Walker Lane, within the historic Tonopah district. Gold-bearing surface veins extend for kilometres. Historic work was shallow, and the deeper source zone has never been drilled.
Drilling 2027

“HSRP is the first Carlin-style, oxide discovery with trend-scale potential identified in Nevada in decades.”

– Dr. Dan McCoy, CEO
